1. Dataset description

The sample dataset models a small academic library. It includes 6 members, 3 staff members, 4 publishers, 7 authors, 5 categories, 8 book titles, 12 physical copies, 8 book-author links, 6 loans, 5 reservations, and 2 fines. Names and contact details are fictional examples created for this assignment.

3. Verification queries

```
SELECT 'Members' AS table_name, COUNT(*) AS row_count FROM Members

UNION ALL SELECT 'Staff', COUNT(*) FROM Staff
UNION ALL SELECT 'Publishers', COUNT(*) FROM Publishers
UNION ALL SELECT 'Authors', COUNT(*) FROM Authors
UNION ALL SELECT 'Categories', COUNT(*) FROM Categories
UNION ALL SELECT 'Books', COUNT(*) FROM Books
UNION ALL SELECT 'BookCopies', COUNT(*) FROM BookCopies
UNION ALL SELECT 'Book_Author', COUNT(*) FROM Book_Author
UNION ALL SELECT 'Loans', COUNT(*) FROM Loans
UNION ALL SELECT 'Reservations', COUNT(*) FROM Reservations
UNION ALL SELECT 'Fines', COUNT(*) FROM Fines;
```

4. Row counts

Table	Rows
Members	6
Staff	3
Publishers	4
Authors	7
Categories	5
Books	8
BookCopies	12
Book_Author	8
Loans	6
Reservations	5
Fines	2

5. Data integrity notes

All inserted foreign-key values refer to rows created earlier in the script. Fine records use existing loan IDs, and the fine amounts are non-negative. The unpaid fine has no payment date; the paid fine has a payment date. The data is designed for demonstrating SQL, not as a claim about any real library.
